HAMPTON STRAINER

SYSTEM

PATENT PENDING

Hampton's UK manufactured metal strainer systems are an excellent long-life alternative to traditional timber strainer assemblies.

Its light weight, yet incredibly strong, heavily galvanised tubular construction allows strainers to be erected easily, often without the need for pre-augered holes.

Hand held post drivers can be used, a real benefit when the terrain prevents vehicular access.

INTRODUCING THE NEW METAL STRAINER SYSTEM FROM HAMPTON

Supplied in both box and angle strut options, packs include anti-lift/anti-twist heel and breast plates, bracing wires, Gripples and post/strut connectors providing easy to assemble straining systems.

Truly versatile, the metal strainer system posts are offered in various lengths suitable for fence heights up to 2.6 metres high.

The ingenious stainless steel post/strut connector provides superior strength and stability. Multiple struts can be attached to any Hampton strainer post permitting changes in direction where required.

Conveniently located bolt holes prevent fences from lifting under tension on undulating terrain.

Combined with Hampton's intermediate metal post system, StapleloK, customers can be assured of a fully integrated metal post system that delivers on quality, versatility, strength and durability.
